# Key Summary

---

One of the biggest problems in marketing consumer goods in China is reaching the target market cost effectively.

For imported brands, which tend to be more expensive, they need to locate those cities which offer sufficient target (affluent) customers to justify distribution and offer profit potential.

In 2011 there are estimated to be 53.6 million urban households earning over Rmb 100,000 (US\$15,725) pa. which is an income level which permits discretionary expenditure. It is the top 22.6% of all urban households and is the top 12.3% of all households.

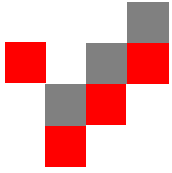

Of these 53.6 million households, 28.0 million earn over Rmb 140,000 (US\$22,000) pa.

If it is assumed that the total real GDP grows at an annual average rate of 5.8% per annum for the 10 years to 2021 and that average urban household incomes grow at 5.6% per annum, then:

The number of Rmb 100,000 + households will increase from 53.6 million to 134 million

The number of Rmb 140,000 + households will increase from 28.0 million to 89 million

So a large and high growth market segment. BUT where are they located?

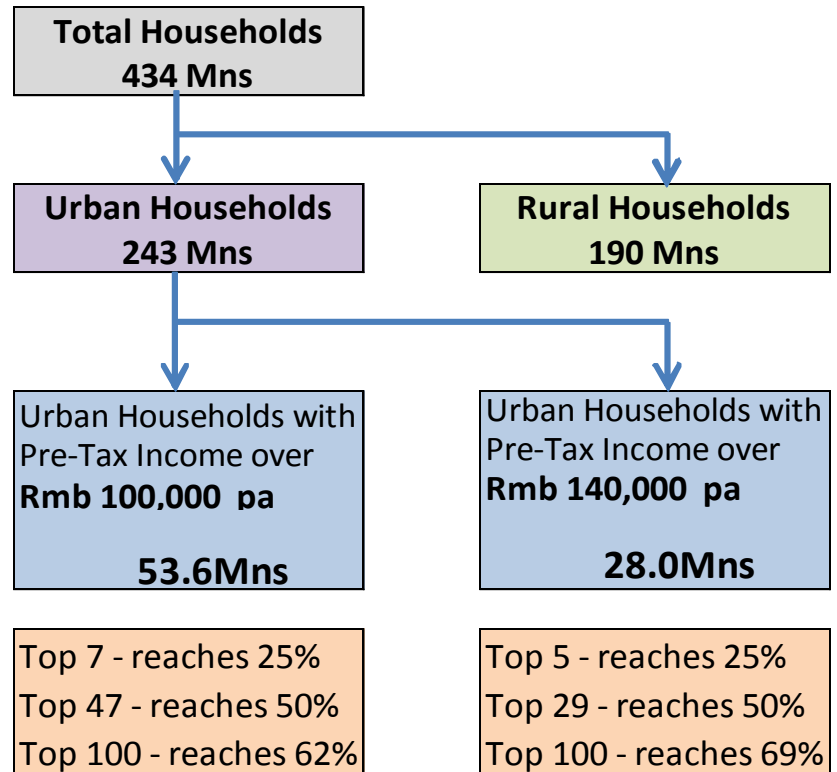

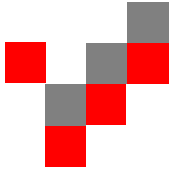

# Key Summary

In 2011 to reach 50% of the Rmb 100,000 plus households a company needs distribution in 47 cities. To cover 25% of this same target market 7 cities are required.

For the affluent segment (Households with a pretax income over Rmb 140,000 a total of 29 cities are required to cover 50% of them and 5 to cover 25%.

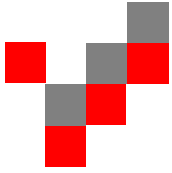

To put this in context, in 2011 there are 844 urban areas with more than 200,000 urban population. There are significant efficiencies to be gained by targeting these key cities.

# Introduction

---

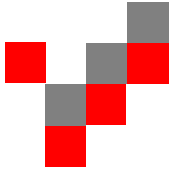

This report identifies those urban areas in China that account for the majority of the more affluent households, and then profiles the individual cities.

The first section provides context in terms of trend in number of urban households and the distribution of households by income

The second Section summaries the importance of the affluent household segment in China to the overall consumer market

The Third section summaries the top 100 cities in terms of overall importance to the consumer market, geographical spread and growth

The Final section is tables giving a profile of the individual cities.

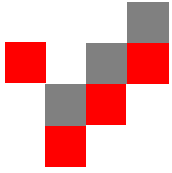

## Note

---

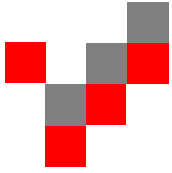

All financial data (household incomes, expenditure, GDP) are in real 2010 values. That is, the impact of inflation has been removed.

The data in this report incorporates the results of the 2010 Census. However, there may be revisions in that data in the short term by the State Statistical Bureau as they complete their analysis, in which case the report will be updated.

## Section 1

# TREND IN NUMBER OF URBAN HOUSEHOLDS AND THEIR DISTRIBUTION BY INCOME

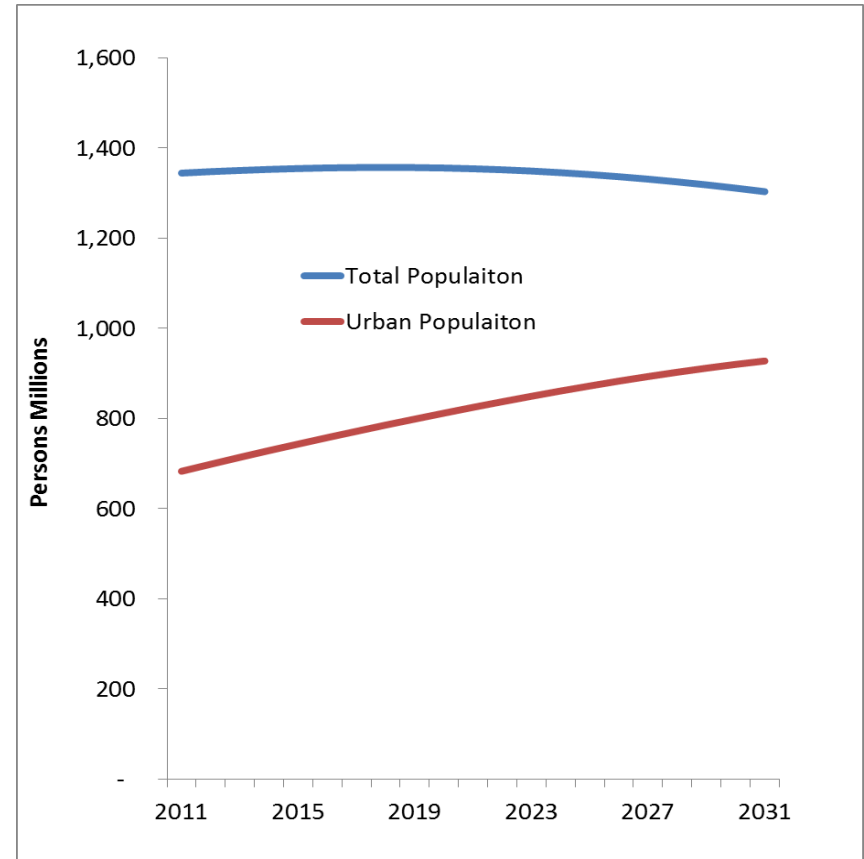

# Trend in Urban Population and Urban Households

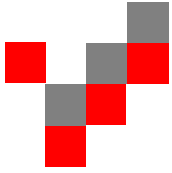

The total population of China is now at its peak and starts to decline after 2019

However, the urban population continues to grow as a result of the continuing, but slowing, rural to urban migration that is occurring.

As a result, Urban population will grow from 682.7 million persons in 2011 to reach 824.6 million in 2021 and 927.5 million by 2031.

# Number of Urban Households and Urban Household size

The number of urban households is a function of the total urban population and the trend in average number of persons per urban household.

As mentioned, urban population is increasing.

The average urban household size is projected to decline and goes from 2.8 persons per household in 2011 to 2.7 persons in 2031.

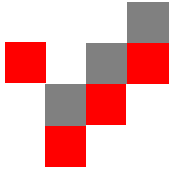

This means that total urban households increase by 55.8 million over the next decade to 2021.

Year	Urban Households	Persons per Urban Household
	Millions	Persons

2011	243	2.80
2016	273	2.78
2021	299	2.75
2026	324	2.73
2031	345	2.69

Average Growth Rate per annum

2011-2021	2.1%	
2021-2031	1.4%	

# Trend in Total GDP and Proportion that is Private Consumption

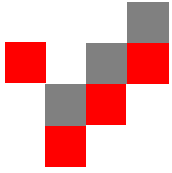

The subsequent forecasts of household income makes the following assumptions:

1: That the total real GDP of China grows in real terms at 5.8% per annum between 2011 and 2021.

2: That the Private (Household) consumption expenditure share of GDP increases from 34.3% to 36.5% over the same time period.

	Total Real (2009) GDP	Private consumption expenditure by Households
--	-----------------------	---

	Rmb Bn	CAGR pa	Rmb Bn	% GDP
2001	16,365		6,992	42.7%
2006	26,647	10.2%	9,112	34.2%
2011	44,157	10.6%	15,136	34.3%
2016	61,525	6.9%	21,747	35.3%
2021	77,916	4.8%	28,401	36.5%
2026	92,691	3.5%	34,840	37.6%
2031	103,117	2.2%	40,814	39.6%

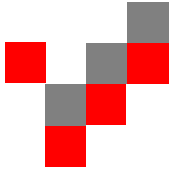

# Trend in Pre Tax Household Incomes

It is projected that the average pre tax Urban household income will grow from Rmb 77,374 pa in 2011 to reach Rmb 133,909 pa in 2021. This is 5.6% per annum for that time period.

Rural Incomes are projected to grow at 5.6% per annum and are much lower in absolute value than that of urban households.

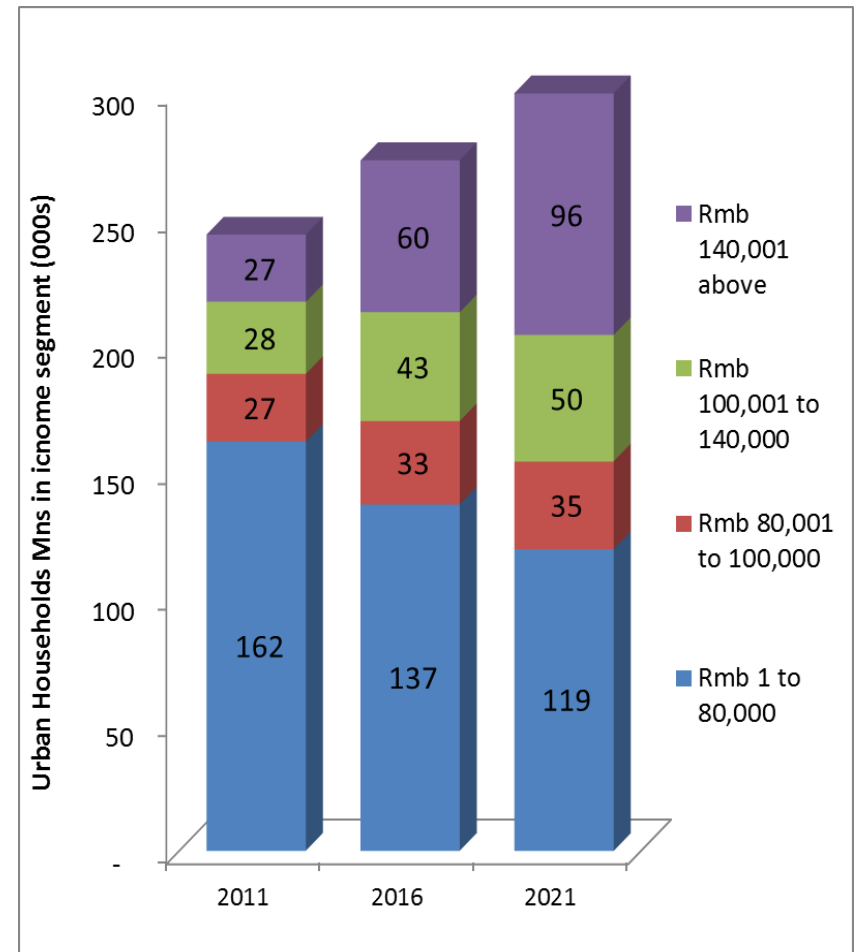

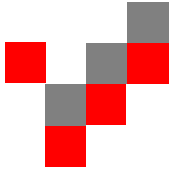

# Distribution of Urban Households By Pre Tax Income

In the next decade to 2021, the number of households with an income over Rmb 140,000 will go from 27 million to reach 96 million. That is an additional 69 million affluent households.

The Rmb 100,001 to Rmb 140,000 segment grows by 15 million households over the next 5 years. That is a 51% increase. It shows virtually no growth after then.

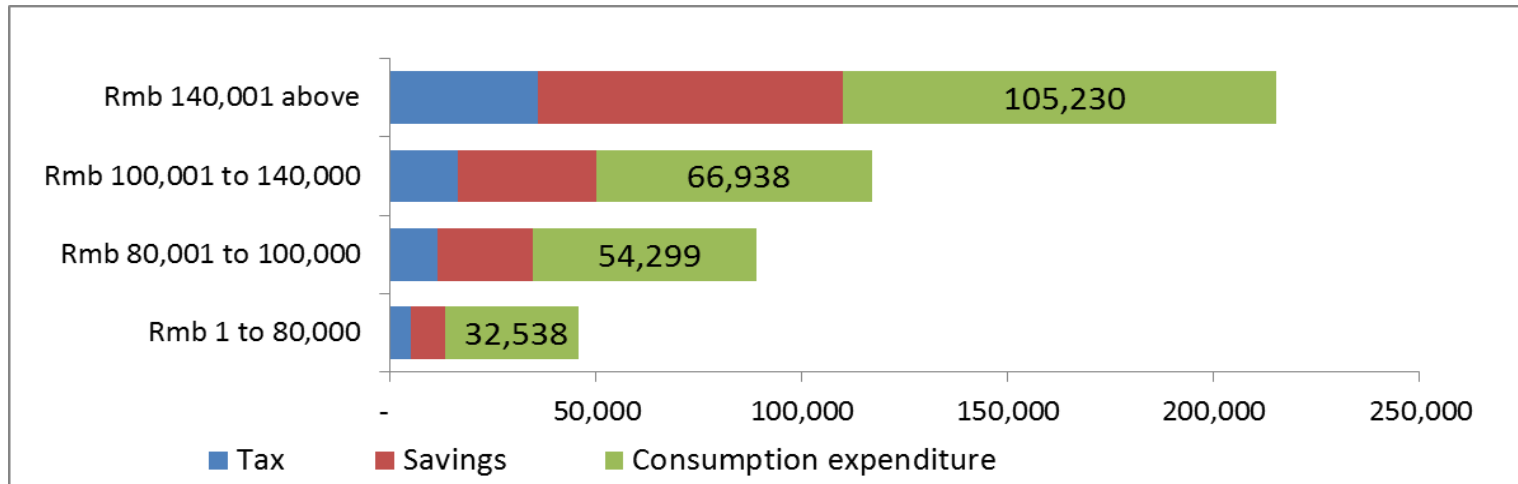

The obvious conclusion from this is to focus on the 100,000 plus segment for the next 5 years and then move to the Rmb 140,000 plus segment after 2016.

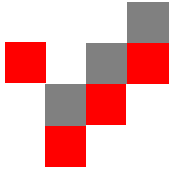

# Propensity to Spend and Save by Income Segment

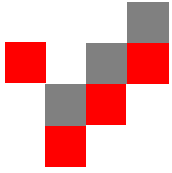

This table summarises the propensity of the four income segments to spend, or save their income. Basically the data at present shows that as incomes increase the proportion that is saved also increases. This means that while spending increases it does so at a slower pace than incomes.

## Section 2

# **RELATIVE IMPORTANCE OF KEY INCOME SEGMENTS TO OVERALL URBAN CONSUMER MARKET.**

# Share of Total Spending Accounted for by Each Income Segment - 2011

This is the total spending power of each segment – being the number of urban households in the segment multiplied by the average expenditure per household in that segment.

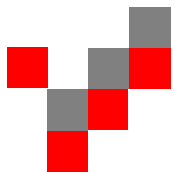

It demonstrates the economic attractiveness of the higher income segments.

In 2011 The top two income segments account for 23% of households and 41% of market value.

However, by 2021 The top two income segments will account for 49% of households and 71% of market value.

Income Segment	Total Household Expenditure			
	2011		2021	
	Urban Hholds	Total Exp Mns Rmb Bn	Urban Hholds	Total Exp Mns Rmb Bn
Rmb 1-80,000	162	5,263	119	4,126

Rmb 140K plus	27	2,789	96	11,513
<b>Total</b>	<b>243</b>	<b>11,411</b>	<b>299</b>	<b>20,828</b>

	Share by Income Segment			
	Hholds	Expenditure	Hholds	Expenditure
Rmb 1-80,000	66%	46%	40%	20%
Rmb 80K-100K	11%	13%	12%	9%
Rmb 100K-140K	12%	17%	17%	16%
Rmb 140K plus	11%	24%	32%	55%

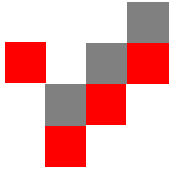

# Rmb 100,000 + Segment Share of Total Expenditure by Category of Expenditure

This table shows the importance of the Rmb 100,000 + segment relative to the total urban market by category of expenditure. In 2011 this varied from a high of 57% for Transport to a low of 35% for Education.

	Total Expenditure Market Value (Rmb Bn)					
	2011			2021		
	All urban	Rmb 100K+	Rmb 100K+ as % total	All urban	Rmb 100K+	Rmb 100K+ as % total

# Rmb 140,000 + Segment Share of Total Expenditure by Category of Expenditure

This table is the same as that on the previous page except it focuses on urban households with an income over Rmb 140,000+.

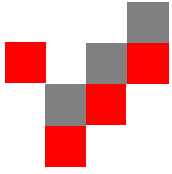

These households account for 17% of all urban household expenditure in 2011 and this is projected to increase to 55% by 2021. At which time they are 32% of all urban households.

	Total Expenditure Market Value (Rmb Bn)					
	2011			2021		
	All urban	Rmb 140K+	Rmb 140K+ as % total	All urban	Rmb 140K+	Rmb 140K+ as % total

## Section 3

# WHERE IS THE AFFLUENT URBAN HOUSEHOLD LOCATED

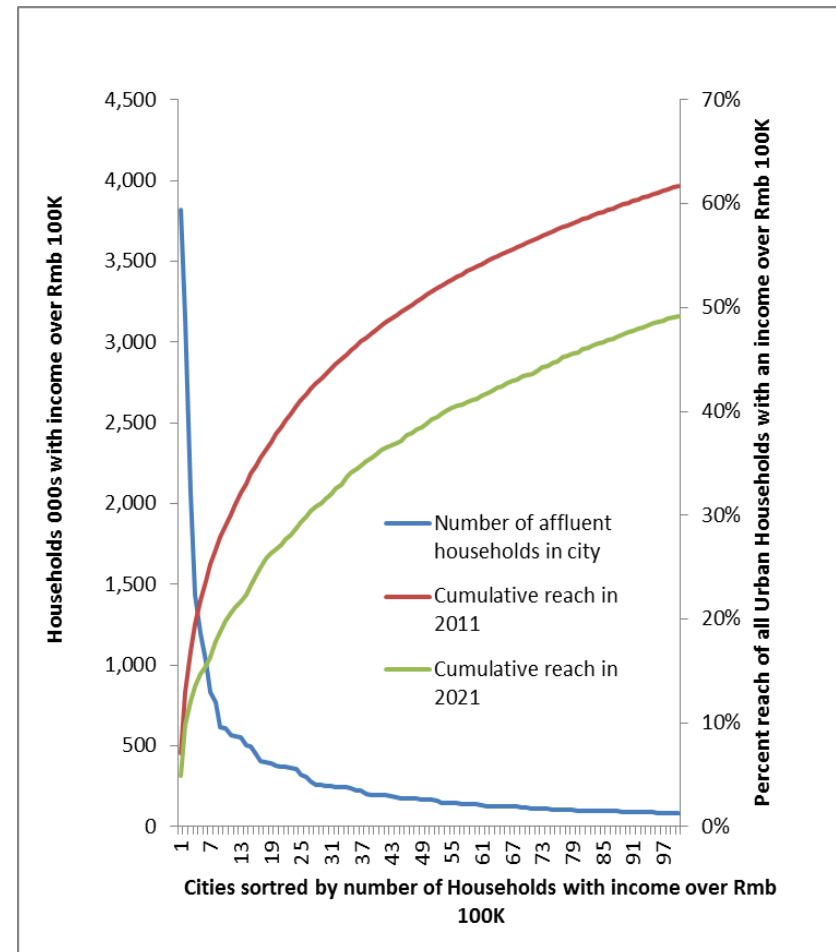

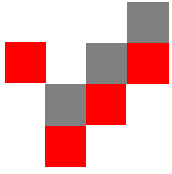

# Number of Affluent Households Reached by Number of cities (Rmb 100,000 + income)

This chart shows the distribution of households with an income over Rmb 100,000 pa by urban areas. The Left hand vertical axis is number of affluent households (000s) in the city and the horizontal axis is the cities sorted by number of such households.

It demonstrates that the number of households with a pre-tax income over Rmb 100,000 pa in each city declines rapidly in number. In 2011 only 6 cities had more than 1 million such households. By 2021 however, this will have increased to 16 cities.

The right hand axis is the proportion of all urban households with a pre-tax income over Rmb 100,000 that is reached as additional cities are added .

# Number of Affluent Households Reached by Number of cities (Rmb **100,000** + income)

As shown in the chart on the previous page and in this table, in 2011 the top 10 cities account for 29.0% of all such households.

With the spread of affluence that is taking place, this proportion reached by the top 10 cities declines over time although the absolute number of affluent households reached in those cities increases.

Do note the relatively small number of affluent households in the 100th city. Is 84,344 households sufficient to justify distribution?

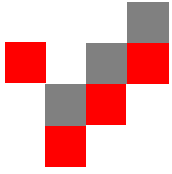

Number of Affluent Households	Share of all Affluent Households	Number of Affluent Households smallest city
000s	%	000s

## 2011

top 5	11,674	22%	1,201
Rank 6 to 10	3,853	7%	608
rank 11 to 25	6,494	12%	320
Rank 26 to 50	5,423	10%	169
Rank 51 to 100	5,619	10%	84

## 2021

top 5	19,702	15%	1,555
Rank 6 to 10	6,899	5%	1,528
rank 11 to 25	12,783	10%	846
Rank 26 to 50	12,706	9%	458
Rank 51 to 100	13,804	10%	185

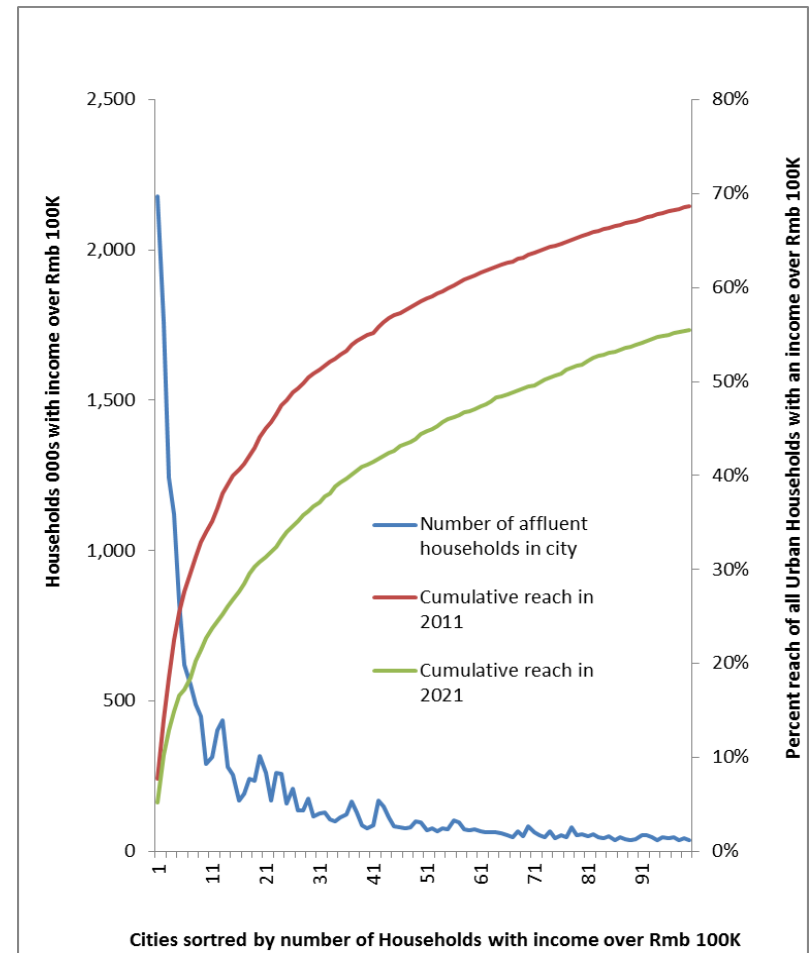

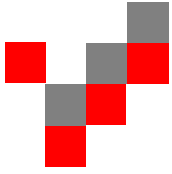

# Number of Affluent Households Reached by Number of cities (Rmb 140,000 + income)

This chart is the same as that previously but now shows the distribution of households with an income over Rmb 140,000 pa by urban areas. The Left hand vertical axis is number of affluent households (000s) in the city and the horizontal axis is the cities sorted by number of such households.

It demonstrates how the number of households with a pre-tax income over Rmb 140,000 pa in each city declines rapidly in number as you move away from the top set. In 2011 only 4 cities have more than 1 million such households. This increases to 8 cities by 2021.

The right hand axis is the proportion of all urban households with a pre-tax income over Rmb 140,000 that is reached as additional cities are added .

# Number of Affluent Households Reached by Number of cities (Rmb 140,000 + income)

As shown in the chart on the previous page and in this table, in 2011 the top 10 cities account for 34.0% of all such households.

With the spread of affluence that is taking place, this proportion reached by the top 10 cities declines over time although the absolute number of affluent households reached within them increases.

Do note the relatively small number of affluent households in the 100th city. Is 38,419 households sufficient to justify distribution?

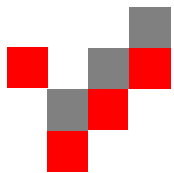

Number of Rmb140K+ Households	Share of Rmb140K+ Households	Number of Rmb140K+ Households smallest city
000s	%	000s

## 2011

top 5	7,130	25%	829
Rank 6 to 10	2,397	9%	290
rank 11 to 25	3,946	14%	158
Rank 26 to 50	2,949	11%	96
Rank 51 to 100	2,836	10%	38

## 2021

top 5	14,643	17%	1,435
Rank 6 to 10	5,497	6%	1,173
rank 11 to 25	9,944	11%	599
Rank 26 to 50	9,234	10%	395
Rank 51 to 100	9,894	11%	120

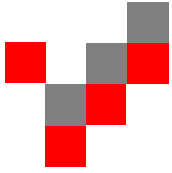

# Listing of Key Cities

The Table on this and the next page give a simple listing of the cities that have the most households with a pre-tax income in excess of Rmb 100,000 pa.

More detailed profiles of each city are given in the final section. The cities are listed in terms of the number of affluent households that they have.

2011		Type	Rank	Population 000s	Urban Households 000s			As % all Households

# Geographical Concentration

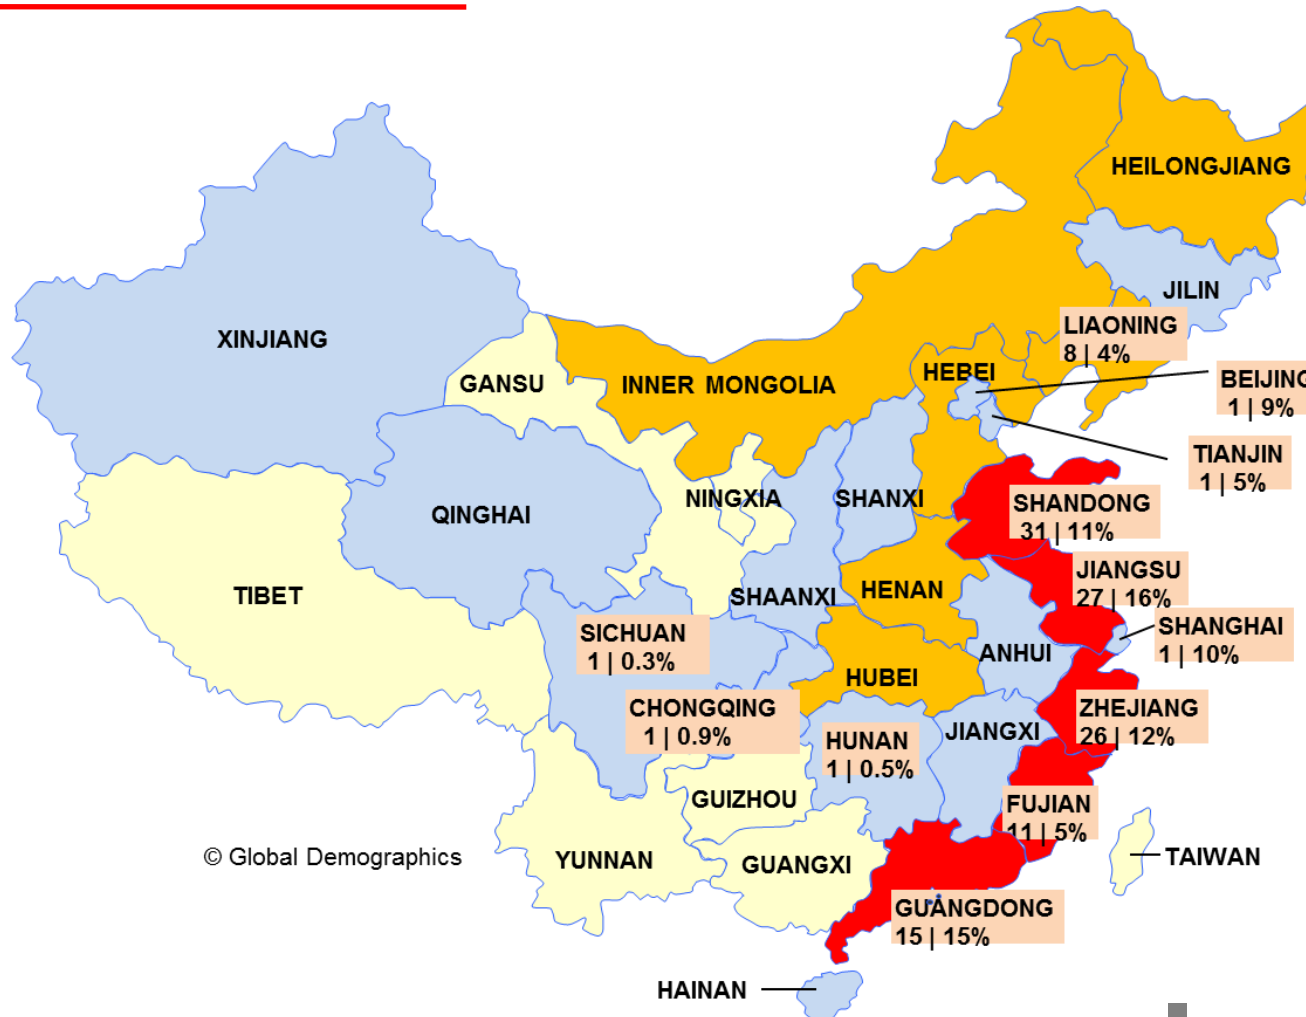

One of the biggest costs of doing business in China with its large geographical areas, is distribution.

This table summarises the Province level concentration of the key cities listed on the previous pages. Clearly there are advantages to be gained from focusing on selected Provinces and then cities within those provinces.

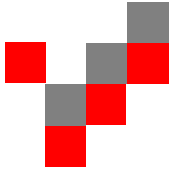

Province	Key Cities	Target 100K+	Share of Target Households
Jiangsu	22	5,575	17%
Guangdong	12	5,188	16%
Shanghai	1	3,818	12%
Zhejiang	16	3,450	10%
Beijing	1	3,155	10%
Shandong	14	2,734	8%
Tianjin	1	2,064	6%
Fujian	8	1,695	5%
Liaoning	3	1,164	4%
Hebei	4	640	2%
Henan	3	533	2%
Hubei	1	498	2%
Chongqing	1	445	1%
Shaanxi	1	368	1%
Inner Mongolia	2	312	1%
Heilongjiang	1	243	1%
Hunan	1	198	1%
Shanxi	1	196	1%
Jilin	1	167	1%
Sichuan	1	124	0%
Anhui	1	111	0%
Guangxi	1	107	0%
Xinjiang	1	95	0%
Jiangxi	1	93	0%
